

Taking Care of Baby's Teeth - Bottle Weaning Tips

Does your child fall asleep with a *bottle of milk or a sugary drink*?

Is your *12 month old child* still drinking from a bottle?

If **yes**:

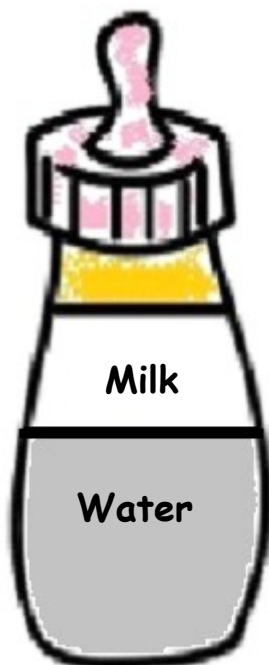

- Slowly *introduce water* into the bottle.
- Increase the amount of water slightly each week for a *4-6 week period*.
- By week 4-6, the child will either continue to take the water bottle or avoid the bottle entirely. *This will reduce the risk for early childhood tooth decay.*
